PROFESSIONAL SUMMARY

MCA student seeking a Data Analyst role, with hands-on experience in Python, SQL (MySQL) and NoSQL (MongoDB) databases, and API-based data processing. Built full-stack projects that collect, structure, and process data – including YouTube transcripts and vehicle service, insurance, and PUC expiry records – to deliver AI-generated summaries, tracking dashboards, and automated reminders. Strong foundation in programming, data modeling, and technical documentation; quick learner who works well in teams and delivers within deadlines.

EDUCATION

KIT's Institute of Management Education & Research (KIT IMER), Kolhapur
Master of Computer Applications (MCA) | 2025–2027

Shivraj College, Gadhinglaj
Bachelor of Science in Computer Science | Percentage: 67.71%

TECHNICAL SKILLS

Programming: Python, Java, JavaScript, TypeScript
Databases: MySQL, MongoDB
Data Handling: Data Processing, Relational Data Modeling, Text/Transcript Processing, API Data Integration, Audit Logging
Web Technologies: HTML5, CSS3, JavaScript, Flask, React, Tailwind CSS
Tools & Technologies: GitHub, REST APIs, Gemini API
Core Skills: Analytical Problem Solving, Technical Documentation, Team Collaboration, Time Management

PROJECTS

TechTalk Vault — AI-Powered Technical Learning Platform

- Built a full-stack web platform using Python, Flask, MongoDB, HTML5, CSS3, and JavaScript to store, organize, and deliver technology interview content from a structured database.
- Collected and processed YouTube transcripts through APIs, preparing text data for AI-based video summarization and transcript-based question answering.
- Integrated the Gemini API to generate video summaries and answer user questions directly from transcript data.
- Implemented user authentication, user profiles, and an admin dashboard for managing platform content and user data.

RemindMe — Vehicle Service, Insurance and Document Reminder System

- Developed an automated vehicle service, insurance renewal, and PUC reminder platform for car dealerships and vehicle owners using React, TypeScript, and Tailwind CSS.
- Designed an in-memory relational data model and reminder engine to track vehicle service intervals, IDV valuations, and insurance/PUC expiry timelines.
- Integrated simulated SMS and email notification gateways with DLT headers and SMTP relay audit logs, creating a traceable record of multi-channel customer communications.
- Built a role-based access control system with an employee/admin operations dashboard and a customer portal for booking service appointments.

RELEVANT STRENGTHS

- Data & Programming Foundation: Hands-on knowledge of Python, Java, JavaScript, MySQL, and MongoDB with end-to-end project experience.
- Learning Agility: Strong interest in data analytics, emerging technologies, and continuous technical learning.
- Collaboration & Communication: Comfortable incorporating feedback, coordinating technical work, and communicating clearly.
- Execution: Able to prioritize tasks, manage time effectively, and work toward strict deadlines.

ADDITIONAL INFORMATION

Career Focus: Data Analytics | Data Processing | Full-Stack Development
Availability: Open to Data Analyst opportunities (internship and entry-level)
