GANDHARV SANKPALE

MCA Student | Full-Stack Developer

gandharv9384@gmail.com | India

GitHub: github.com/Gandharv84 | LinkedIn : linkedin.com/in/gandharv-sankpale

PROFESSIONAL SUMMARY

MCA student and Full-Stack Developer with hands-on experience developing and maintaining full-stack software projects using Python, Java, JavaScript, Flask, MongoDB, and MySQL. Strong foundation in programming, troubleshooting, problem-solving, and software development. Experienced in building technical projects, integrating APIs, implementing authentication and admin functionality, and working with development tools such as GitHub. Passionate about learning new technologies, collaborating on technical initiatives, and delivering assigned tasks within deadlines.

EDUCATION

KIT's Institute of Management Education & Research (KIT IMER), Kolhapur
Master of Computer Applications (MCA) | 2025–2027

Shivraj College, Gadhinglaj
Bachelor of Science in Computer Science | Percentage: 67.71%

TECHNICAL SKILLS

Programming: Java, Python, C++, JavaScript

Web Technologies: HTML5, CSS3, JavaScript

Backend: Python, Flask

Databases: MongoDB, MySQL

Tools & Technologies: GitHub, REST APIs, Gemini API

Core Skills: Problem Solving, Troubleshooting, Analytical Thinking, Software Development, Technical Documentation, Team Collaboration, Time Management

PROJECT

TechTalk Vault — Full-Stack Technical Learning Platform

- Developed a full-stack web platform using Python, Flask, MongoDB, HTML5, CSS3, and JavaScript to organize and deliver technology interview content.
- Implemented user authentication, user profiles, and an admin dashboard for managing platform content.
- Integrated the Gemini API to support AI-based video summarization and transcript-based question answering.
- Worked with YouTube transcripts and APIs, processing technical content for summarization and interactive Q&A.

RemindMe — Vehicle Service, Insurance and Document Reminde System

- Developed an automated vehicle service, insurance renewal, and PUC reminder platform for car dealerships and vehicle owners using React, TypeScript, and Tailwind CSS.
- Engineered an in-memory relational database and reminder engine to track active vehicle service intervals, IDV valuations, and insurance/PUC expiry timelines.
- Integrated simulated SMS and email notification gateways with DLT headers and SMTP relay audit logs for multi-channel customer communications.
- Built a role-based access control system featuring an employee/admin operations dashboard alongside a customer portal for booking service appointments.

RELEVANT STRENGTHS

- **Technical Problem Solving:** Able to identify application issues, analyze problems, and implement practical solutions.
- **Programming Foundation:** Hands-on knowledge of Python, Java, C++, and JavaScript with full-stack development experience.
- **Learning Agility:** Strong interest in emerging technologies, software development methodologies, and continuous technical learning.
- **Collaboration:** Comfortable working on project tasks, incorporating feedback, and coordinating technical work.
- **Execution:** Able to prioritize assigned tasks, manage time effectively, and work toward strict deadlines.
- **Communication:** Clear technical communication with a solution-focused approach.
